Lead Swabs

I. Required Items:

Lead Sheets (will be used but not consumed)
Cotton-tipped swabs, 100

II. Instructions For Preparation:

Wipe the cotton tip of the swabs on the surface of the lead sheets, transferring lead to the cotton swabs. Test the lead swabs by performing the Sodium Rhodizonate Test for lead residue. An untreated swab (negative control) should be tested as well. A positive result indicating the presence of lead occurs when the lead swab turns a blue-violet color following the spraying of 5% Hydrochloric Acid solution. The negative control should not turn blue-violet.

III. Storage Conditions:

Store at room temperature.

IV. Expiration Date:

Lead swabs do not expire.
